

Amendments to the Specification

Please replace the paragraph beginning at page 5, line 4, with the following rewritten paragraph:

In co-pending application for United States patent, serial No. ~~(attorney docket CCP-2-046)~~
10/706,412 entitled "Multiphase Motors With Single Point Sensing Based Commutation" by
Petersen, filed [[]] November 12, 2003, a simplified control for multiphase
electrically commutated motors is described. The control approach utilizes a single sensor in
association with a sensible system to establish reliable phase commutation sequencing. An
important result is a significant lowering of the cost of the commutation function of the motors.
